

PROFILE AND CAPABILITY

Holmes Fire specialises in the development of performance based fire engineering design solutions for buildings and infrastructure and in the provision of Building Code Assessments. We have been providing these services to the Australian market for over sixteen years and were one of the first to provide fire engineering services locally.

Our Sydney office has ten professionally qualified fire safety specialists and five C10 Accredited Fire Safety Engineers (NSW). Holmes Fire also has engineers with accreditation in Victoria and Queensland. We are also able to call on more than thirty additional specialists in our New Zealand and United States businesses. Collectively we comprise one of the largest groups of specialist fire engineers in Australasia.

Our consultants are recognised specialists in their respective fields with a wealth of experience in a diverse range of projects. Holmes Fire has a philosophy of finding the most appropriate specialists for each task and organising them into an efficient project oriented team that will provide the greatest benefit to the client.

We perform best in a collaborative environment with the client, design team, other relevant stakeholders and the regulatory authorities. In this way, we will maximise value by achieving optimum design and operational flexibility while ensuring compliance with the various regulatory requirements.

Experience has shown we can add greatest value to a project by being involved in the preliminary design phase rather than being limited to addressing non-compliances identified by others.

Holmes Fire has a reputation for innovation and an extensive record of delivery on challenging projects. We combine our education, expertise and experience to deliver real value on projects. We believe that the fire safety design should work for the owners and occupiers, complementing the way that buildings are designed and used. Our holistic and practical approach to fire safety engineering and our experience with a vast range of projects ensures this.

Our clients include building owners, operators and managers, developers, architects, project managers and regulatory authorities. Our projects include low and high rise apartments, retail and commercial developments, heritage buildings, warehouses, manufacturing plants, assembly buildings, aged care facilities, hospitals, car parks, stadia and infrastructure.

Holmes Fire aims to be the fire engineering firm of choice by clients as well as employees.
